# TITAN-II

## The Premiere Multi-Feature Warewash Dispenser

The TITAN II is the first of its kind with its unique auto switchover mode designed to reduce the number of service calls. The unit can be set up in concentration, probeless or auto switchover mode depending on the installation requirements. If set up in auto switchover mode, the unit will automatically switch over to probeless mode if the probe fails to function correctly. Once the condition is resolved, it will switch back to concentration mode and log the switchover eliminating the need for an emergency service call.

- Provides efficient product management and control
- Easily programmed to maximize product yield
- **Saves money**
- Energy efficient
- Digital display makes unit user friendly
- Compatible with door or conveyor type machines
- Built in rack counter
- Splash resistant ABS material for durability
- Pre-wired for quicker installation
